Testing Admin Dashboard:
To test the admin dashboard in an internship application management system, you can perform the following actions:

Log in as an admin user and ensure the authentication process is functioning correctly.
Verify that the admin dashboard loads without errors and displays the necessary components and information.

Test the functionality of each feature, such as managing user accounts, reviewing applications, communicating with stakeholders, generating reports, etc.

Check for responsiveness and ensure the dashboard looks and functions well across different devices and screen sizes.

Conduct end-to-end testing to verify the integration between the admin dashboard and other system components, such as the database or external APIs.

Responsibilities of an Admin:

In the context of an internship application management system, the responsibilities of an admin may include:

Managing User Accounts: Creating, updating, and disabling user accounts for students, receptionists, and other stakeholders.

Application Review: Reviewing internship applications, evaluating candidate qualifications, and making decisions regarding acceptance or rejection.

System Configuration: Configuring system settings, such as application deadlines, email notifications, and access permissions for different user roles.
